

Services information: Linux support

With w3logistics from Windows to Linux

Migration of existing solutions – without building up own know-how

Your customers request Linux? Offer it!

An increasing number of users migrates from Windows to Linux, especially in the civil service. This situation imposes some challenges on software suppliers:

How do you migrate software solutions for your own customers fast, securely and reliably?

Does it pay off to build up own Linux know-how for this purpose?

And if you decide to migrate your products to Linux on your own: Can you do it fast enough? And most important: Faster than your competitors?

For whom is w3logistics a suitable partner?

You want to migrate single existing customer applications?

w3logistics offers you qualified support for individual projects, as well with the migration of individual software, as with standard software products.

You want to offer all your solutions for Linux too, and be faster than your competitors?

w3logistics offers short-term support for the quick migration of your solutions, and long-term consulting to support build up of your own know-how.

Which advantages does w3logistics offer?

- w3logistics offers extensive Linux know-how – as well from our customer projects, as from our own product development.
- You can access Linux know-how via w3logistics quickly, and thus bind customers which already migrated to Linux to you.
- With w3logistics' support you can quickly demonstrate working solutions running on Linux – thus customers planning to migrate will not even think about asking your competitors for support.
